Phish Alert Button Resources

- The "Phish Alert" button is a feature on the Home Ribbon in Outlook that helps users to immediately report phishing emails in non-shared mailboxes to our Information Security Team. These emails are not normally released back to Employees so please reach out to the IT Help Desk if you have questions.

- SCC Employees can review our Phish Alert Button resources by navigating to The Hub > Employee Services > Technology Training (see screenshot) or by clicking the direct links below.

Click on one of the links to view the training
You must be logged in to the SCC Hub
